

Editorial Policy of SIGIR *Forum*

Several types of invited or submitted contributions are published in SIGIR *Forum*, including (but not limited to):

- Reports from the Chairs of IR-related workshops (such as the satellite workshops of CIKM, JCDL, and SIGIR, or other workshops such as NTCIR) or of IR-related conferences other than SIGIR (such as ECIR, HLT, SPIRE, and TREC)
- Papers based on IR-related invited talks that have not been published in full in the relevant conference proceedings
- Papers describing new infrastructure for IR research, such as in-depth descriptions of newly-available test collections, newly-available open source or public domain IR software of particular relevance, and new evaluation campaigns
- Papers about issues such as funding initiatives, industry trends, connections between research and industry, and legal issues that are of interest to the IR community at large
- Papers that, while of general interest to the IR community, are non-technical and because of this would be unsuitable for publication in "technical" publishing forums such as the SIGIR annual conference
- Abstracts of IR-related PhD dissertations
- Book reviews, bibliographies, letters to the Chair, or announcements of general interest to the IR community

SIGIR *Forum* does not generally publish (and thus does not solicit the submission of) technical papers that, provided they are of sufficient quality, would be appropriate for a technical forum such as the SIGIR annual conference.
